

BEST KEPT SECRET IN AESTHETICS...

Cutera!

At Cutera, we develop new solutions that give medical aesthetic professionals the power to adapt, evolve, and stay at the forefront of the field so that they can deliver true patient satisfaction. Ideating, exploring, designing, testing, and developing new solutions is the foundation of our process that has created truly one-of-a-kind devices. Committed to providing world class customer service to our partners we have recently invested in growing our team to provide post-purchase support and customer engagement to match the unquestionable quality and performance of our aesthetic devices. Here's what some of our clinic partners have to say about working with Cutera.

DR JOSEPH HKEIK, ALL SAINTS SKIN CLINIC:

"We have had Cutera since the early days of All Saints and the experience has always been extremely positive. The device is reliable, easy to use and backed by science. Additionally, Cutera has always been a great company to work with, really believing in their devices and offering support to our team whenever we have needed it. Most importantly it enables us to give our clients impressive and reproducible results."

I would say that the Excel V+ is way ahead of other technologies on the market. It is a highly engineered and versatile device that targets vascular and pigmentary conditions. At All Saints, we use it for many different indications and it is great to have one device that is so flexible, treating such a range of conditions on all skin types including: deeper, darker vascular lesions, rosacea, photodamage and facial telangiectasias. It forms an essential part of our signature Red Carpet Laser Facial with its Genesis component, improving fine lines, wrinkles and promoting collagen, as well as softening scars. The green Genesis targets reds and browns on the face and the body with no downtime. In addition to all these benefits, the Genesis treatments are twice as powerful in half the time."

DR CLAIR MCCARTNEY, SANCTUM MEDICAL AESTHETICS:

"I have been using Cutera lasers since I first started in Cosmetic Medicine, and continue to purchase them because of their reliability, flexibility in treatments and the exceptional customer service that continues well after the purchase with Cutera. A particular favorite of mine is the Xeo platform. At my clinic, Sanctum Medical Aesthetics, I have the Cutera Xeo with headpieces Limelight, Prowave, PEARL and Acutip, as well as the 1064nm Laser Genesis. I love being able to see a patient for a holistic treatment that includes a full face Limelight for freckles and pigmentation, some Acutip for blood vessels and hard to reach areas, finished off by a Laser Genesis to the décolletage."

We pride ourselves on treating the person, not the single issue, and for this reason the Xeo continues to perform for our patients and our clinic. We have grown our Cutera platform from an initial workhorse Xeo to include two Excel V+ lasers. In the next 12 months we have our sights set on another Xeo for our second clinic and to branch into TruSculpt and TruFlex for body contouring."

DR ALLAN CLARKE,
ORTHOPAEDIC SURGEON,
SUNSCULPT BODY CONTOURING:

"Muscle wasting and weakness often occurs following reconstructive joint surgery and can prolong post-op rehabilitation. I was impressed with the Cutera research that showed a rapid increase in muscle bulk following treatment with truSculpt flex. I tried the flex on myself and was astounded at the results

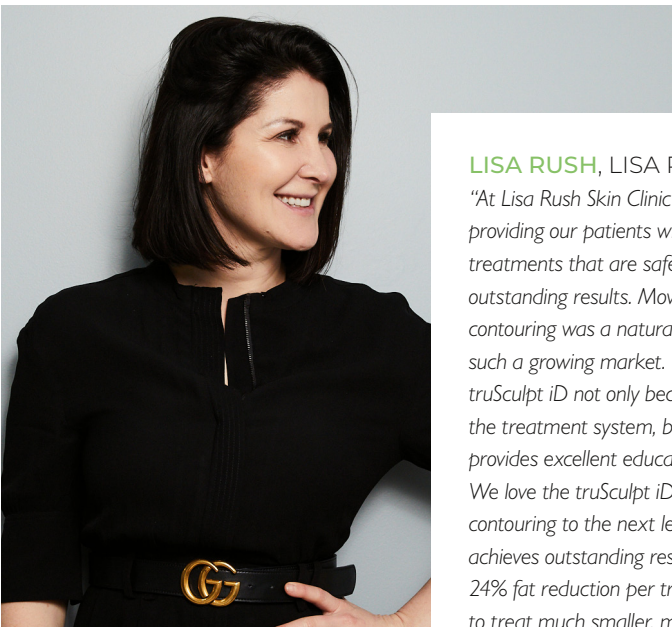

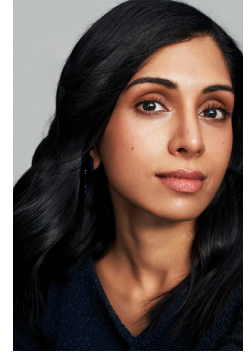

after four treatments both in terms of strength and muscle bulk. I have now used the flex at SunSculpt, located in Maroochydore on the Sunshine Coast, with excellent results in selected patients. In my opinion, the truSculpt flex delivers both muscle sculpting and toning faster than any other treatment modality."

DR SHYAMALAR GUNATHEESAN,
ODE DERMATOLOGY:

"The Cutera truBody system yields great clinical results for muscle building and non-surgical fat reduction. A muscle building device like truSculpt flex can be used alongside a fat reduction technology like truSculpt iD to elevate body aesthetics to the next

level. At ODE Dermatology, my brand new medical and aesthetic dermatology clinic in Melbourne, the truBody system is woven into multi-modality protocols to ensure visibly transformative results on both the inside and out. The patient benefits most in this way because not only do we help them reduce fat and tone muscles (internally), we also restore external skin radiance, reawakening a full body glow and a renewed sense of vitality."

LISA RUSH, LISA RUSH SKIN CLINIC:

"At Lisa Rush Skin Clinic we are passionate in providing our patients with 'state of the art' treatments that are safe, effective, and achieve outstanding results. Moving to the realm of body contouring was a natural progression for us with such a growing market. We chose Cutera and the truSculpt iD not only because of the capability of the treatment system, but also because Cutera provides excellent education and business support. We love the truSculpt iD because it takes body contouring to the next level. It is quick, painless, achieves outstanding results with an average of 24% fat reduction per treatment and enables us to treat much smaller, more targeted areas".

DR SEAN ARENDSE, FLAWLESS
REJUVENATION:

"Cutera has done it again by developing leading technology and partnering with leading physicians world-wide to bring new innovation to the industry. The gold standard in the industry for fat reduction is the truSculpt iD reducing treatment times down to 15mins with an average of 24% reduction in fat per treatment. Over the last couple of years, we have seen the introduction of devices which can now build and define muscle. Everyone wants the muscle definition without spending hours in the gym, so the truSculpt flex is an absolute game changer with the ability to build and define muscle in your lunch break.

From the minute I bought my first Cutera device, I was blown away. Cutera devices deliver results time and time again, consistently, reliably and safely. I know that when I turn the key on my Cutera device that it will always fire up and deliver the results not only I expect but that my clients expect. Partnering with Cutera allows me to keep my practice ahead of the curve. Cutera's constant innovation allows me to offer new proven treatments, and results to my aesthetic clients. The ongoing support that not only me but also my staff receive from Cutera is something that I have not experienced with any other device company."

DR SHOBHAN MANOHARAN,
BRISBANE SKIN:

"The Cutera Enlighten III Picosecond laser is a tremendously versatile device that I believe is gold-standard in its class at present. While useful in removing tattoo pigment, we have extensively and successfully utilised it in the treatment of difficult pigmentary conditions such as melasma and Naevus of Ota. I also use it as one of my go-to treatments for toning, rejuvenation and acne scarring in darker skin types. Cutera have provided excellent support and aftercare, and have always been receptive to my feedback and requirements."
